

THE PRINCE RAJ

Long Video Performance Report

Video: "How Steve Jobs Build APPLE? || THE PRINCE RAJ"
Analysis based on connected vidIQ data | Report date: 10 September 2026

Metric	Result	Assessment
Video length	17:17	Long-form documentary
Current views	~595	Above recent channel benchmark
Likes	6	Low relative engagement
Comments	4	Positive sign, but small volume
Title score	84/100	Good; can improve curiosity
Thumbnail score	98/100	Excellent; do not change now
Best traffic signal	YouTube Search	71.97% average viewed
Main weakness	Early retention	Largest improvement opportunity

1. Executive Summary

The video is not a failure. Its view curve shows a meaningful second/third-day distribution test: approximately 111 views in the first phase, 191 by the next phase, and about 534 by the third day, reaching roughly 595 views. Compared with the channel's historical long-form performance benchmark (about 69-view median at 72 hours and 133-view median at 7 days in the retrieved trend data), this is a strong relative performance.

The strongest assets are the topic and thumbnail. The main opportunity is retention, especially the transition from the initial hook into the main story. Search viewers show a very strong viewing signal, suggesting the subject has genuine audience intent, but search currently contributes very little volume.

2. Retention Analysis

Approximate audience remaining from the retrieved retention curve: ~97% around the opening, ~64% very early, ~45% by roughly 0:50, ~36% around 1:40, ~29% around 3:25, ~24% around 6:50, ~20% around 9:30, ~16% around 13:50, and ~9% at the end. The most important drop is therefore in the early storytelling section.

Interpretation: The hook is capable of getting attention, but the video then asks the viewer to wait too long for the next major payoff. Future documentaries should make the first 30–90 seconds much more eventful, with a new fact, conflict, visual change, or unanswered question every 20–40 seconds.

3. Traffic Source Analysis

Traffic source	Views	Avg. view duration	Avg. viewed
Related videos	127	3:14	18.75%
Subscribers	75	5:04	29.35%
External URL	10	0:06	0.58%
YouTube channel	5	3:34	20.71%
YouTube Search	5	12:26	71.97%
Other YouTube page	2	11:19	65.57%
Notification	1	17:17	100%

Important caveat: Search has only 5 views, so the 71.97% figure is a strong signal but not yet statistically large. Still, it suggests that viewers who actively search for the subject are highly compatible with the content.

4. Subscriber vs Non-subscriber Behavior

Non-subscribers generated 191 views with a 16.17% average viewed percentage, while subscribers generated 35 views with a 53.24% average viewed percentage. Existing viewers therefore consume substantially more of the video. The growth opportunity is to make the opening easier for a completely new viewer to understand without prior channel context.

5. Packaging Analysis

Thumbnail: 98/100. This is the strongest packaging component according to vidIQ. No immediate thumbnail change is recommended.

Title: 84/100. The current title is understandable but grammatically should use “Built” rather than “Build.” More importantly, it is primarily informational. A conflict-based title could create stronger curiosity.

Recommended title direction: “Steve Jobs Built Apple... Then They Kicked Him Out” or “Steve Jobs Was Fired From Apple. Then He Changed Everything.” Test only when the current video has had enough time to run; do not repeatedly change packaging during an active test.

6. Content & Storytelling Diagnosis

The subject is naturally strong because it combines a famous person, business conflict, failure, comeback, technology, and a recognizable brand. The risk is information overload: too many business/history facts can make the narrative feel like a list rather than a story.

Recommended central question: “How did the man who was thrown out of Apple return and transform it into one of the most powerful companies in the world?” Every chapter should answer or intensify that question.

7. Recommended Structure for Future 12–18 Minute Documentaries

Time	Purpose
0:00–0:10	Shock / strongest fact
0:10–0:30	Unanswered question + visual proof
0:30–1:00	Promise of the story; no long greeting
1:00–4:00	Problem / conflict
4:00–8:00	Escalation + first major twist
8:00–12:00	Transformation / major reveal
12:00–15:00	Consequences + payoff
15:00–16:30	Final answer / lesson
16:30–17:00	Short CTA

8. Action Plan

1. Keep the current thumbnail for now.
2. For the next upload, make the first 30–60 seconds much faster and conflict-driven.
3. Avoid long greetings, channel introductions, or generic setup.
4. Add a new curiosity point, visual change, or reveal every 20–40 seconds.
5. Build titles around conflict, stakes, mystery, or transformation—not just “How X Works.”
6. Continue topics around business, technology, money, companies, and influential people, but package them as stories.
7. Use Shorts to create curiosity for the long video rather than treating Shorts and long-form as completely separate content.

9. Final Scorecard

Area	Score	Priority
Topic	9/10	Maintain
Thumbnail	9.8/10	Maintain
Title	8.4/10	Improve curiosity
Story potential	9/10	Strong
Opening / early retention	6/10	Highest priority
Search audience fit	Strong signal	Increase discoverability
Overall	7.8/10	Good foundation

Note: This report uses the available connected vidIQ analytics. It does not replace a frame-by-frame review of the actual video edit, visuals, narration, or audio. Those require the video file itself.
